Re: Plan prepared for Alexis Desauries & Jesse Mclain 750 Cedar Swamp Rd, Coventry, CT

Dear Commissioners:

*I have conducted a delineation to identify the Connecticut regulated wetland soils on the above referenced parcel located on 750 Cedar Swamp Rd, Coventry, CT. This delineation was conducted for the purposes of identifying wetland soils as they relate to a proposed resubdivision prepared by Bushnell Associates of Manchester, CT.*

*The wetlands on this plan have been field delineated in accordance with the standards of the National Cooperative Soil Survey and the definition of wetlands as found in the Connecticut General Statutes, Chapter 440, Section 22A-38.*

*The wetlands/ watercourse boundaries have been marked with pink and blue flagging and labeled as shown on the plan.*

*I have been requested to return to the site to investigate possible wetland soils adjacent to the abutters pond to the south of the subject property. Overland flow originating at the pond has resulted in wetland soil formation to the north northwest, however, the wetland soils end well to the south of the proposed activity. No wetland soils exist within 100 feet of the proposed driveway. No regulated activities associated with the proposed activity exist within 100 feet of the wetland area.*

*This delineation is not intended to be used for soil mapping but to identify the wetland soils relative to the development and management of this parcel.*

**Conclusions:**

*It is my opinion that the proposed subdivision presents no short or long term significant adverse impact to the wetland resources as long as adequate protective provisions are in place during the construction process.*

*If you have any questions concerning this report, please feel free to contact me.*

Sincerely,
